

MODERNISATION AND OPTIMISATION

There are more than 200 times more transactions processed by COBOL applications than Google searches every day.

Modernisation of such applications means preservation of your intellectual property and business knowledge.
Modernize from a position of strength by reusing core business assets and upgrade them for the future!

Our company will support you in:

- Analysis of how to modernise and optimise your existing COBOL systems
- Migration from COBOL to any of modern days languages such as Java, C/C++, C#, J#, VB, PHP...
- Migration between different COBOL platforms
- Thoroughly document your system during modernisation process

Our goal will be to:

- Understand your current business processes
- Through understanding of your business processes also optimise your system while modernising it
- Detect and eliminate parts of your system which are no longer used
- Make your system scalable
